PROCEEDINGS

OF

THE INSTITUTE OF RADIO ENGINEERS

(INCORPORATED)

VOLUME 20

1932

PUBLISHED MONTHLY BY

THE INSTITUTE OF RADIO ENGINEERS

(INC.)

33 WEST 39TH STREET, NEW YORK, N. Y.

U OF I

LIBRARY

CONTENTS OF VOLUME 20

1932

An Index covering the years 1909 through 1930 is available in pamphlet form, and may be obtained from the Institute at $1.00 per copy. A limited number of the 1931 Index, which was published in pamphlet form as a supplement to the January, 1932, issue of the PROCEEDINGS, are offered for distribution.

The Index for 1932 is a continuation of the previous ones. It is numbered chronologically, and the numbers at the left of the titles are keys for use in referring to it from the Authors Index and the Cross Index.

NUMBER 1; JANUARY, 1932

PART I

	Page
Frontispiece, Convention Committee, Rochester Fall Meeting, 1931	2
Institute News and Radio Notes	3
December Meeting of the Board of Directors	3
Rochester Fall Meeting, 1931	5
Radio Signal Transmissions of Standard Frequency	6
Committee Work	7
Institute Meetings	11
Personal Mention	23

PART II

Technical Papers

		Year	Page
918.	The Optics of Radio Transmission Ernest Merritt (Jan.)	1932	29
919.	Ten Years of Transradio—A Retrospect E. Quäck (Jan.)	1932	40
920.	On the Use of Field Intensity Measurements for the Determination of Broadcast Station Coverage C. M. Jansky, Jr. and S. L. Bailey (Jan.)	1932	62
921.	Effect of Shore Station Location Upon Signals R. A. Heising (Jan.)	1932	77
922.	An Untuned Radio-Frequency Amplifier F. W. Schor (Jan.)	1932	87
923.	Historical Review of Ultra-Short-Wave Progress William H. Wenstrom (Jan.)	1932	95
924.	An Experimental Study of Regenerative Ultra-Short-Wave Oscillators William H. Wenstrom (Jan.)	1932	113
925.	An Experimental Study of the Tetrode as a Modulated Radio-Frequency Amplifier H. A. Robinson (Jan.)	1932	131
926.	Theory of Design and Calibration of Vibrating Reed Indicators for Radio Range Beacons G. L. Davies (Jan.)	1932	161
927.	Some Experimental Studies of the Vibrations of Quartz Plates (abstract) R. B. Wright and D. M. Stuart (Jan.)	1932	182
911.	Correction to "A Recent Development in Vacuum Tube Oscillator Circuits," by J. B. Dow (Dec., 1931) (Jan.)	1932	182
928.	Book Review: Experimental Radio Engineering John H. Morecroft Reviewed by S. S. Kirby (Jan.)	1932	183
929.	Book Review: The Orfordness Rotating Beacon and Marine Navigation R. L. Smith-Rose Reviewed by S. S. Kirby (Jan.)	1932	183

SUBJECT INDEX

A

coustical and Electrical Power Requirements for Electric Carillons: 957
coustics:
Studios for Radio City: 996
ircraft Radio:
Antennas for Radio Range Beacon Reception: 941
Directive Guidance: 1024
Radio Equipment for Air Mail and Transport Use: 995
Simultaneous Visual Radio Range Beacon and Radiotelephone: 948
Television Reception in Aircraft: 1022
Vibrating Reed Indicators for Radio Range Beacons: 926
mplification:
Application of Class B Audio, to A-C Operated Receivers: 984
mplifier:
Untuned Radio-Frequency: 922
mplifiers:
Application of Class B Audio, to A-C Operated Receivers: 984
Comparison of Coupled, with Staggered Circuits: 990
Distortion in Receivers and its Compensation: 1005
Fourier Analysis of Radio-Frequency Power, Wave Form: 1016
Operation of Vacuum Tubes as Class B and Class C: 925
Output and Distortion in Symmetrical Output Systems: 1025
Resistance-Capacity Coupled for Television: 963
Resistance-Capacity Design: 1002
Study of Class B and C Tank Circuits: 969
nalyzer:
Simple Harmonic: 964
ntennas:
Action of Short-Wave Frame: 1000
Characteristics of, for Radio Range Beacon Reception in Aircraft: 941
Circuit Relations in Radiating Systems and Applications to: 979
Radiation Characteristics of Vertical Half-Wave: 1034
Transmission Lines for Short-Wave: 989
tmospherics:
Automatic Field Strength and, Recorder: 1035
Directional Studies at High Frequencies: 1036
Estimate of Frequency Distribution: 1007
Audio Amplifiers:
Application of Class B to A-C Operated Receivers: 984
Audio-Frequency Generator: 936
Automatic Volume Control:
Copper-Oxide Rectifiers for Detection and: 1013

B

Batteries:
Design Problems of Air Cell Receivers: 933
Beacon:
Characteristics of Antennas for Radio Range, Reception in Aircraft: 941
Simultaneous Visual, and Radiotelephone: 948
Vibrating Reed Indicators for Radio Range: 926
Beat-Frequency Oscillator: 936
Book Reviews:
Architectural Acoustics, by V. O. Knudsen, (reviewed by J. Weinberger): 1030
Donneès Numeriques de Radioelectricité, edited by R. Mesny, (reviewed by S. S. Kirby): 930
Electricity. What It Is and How It Acts, by Andrew W. Kramer, (reviewed by S. S. Kirby): 992
Electronics, by R. G. Hudson, (reviewed by W. C. White): 1042
Experimental Radio Engineering, by J. H. Morecroft, (reviewed by S. S. Kirby): 928
Foundations of Radio, by R. L. Duncan, (reviewed by S. S. Kirby): 1018
Handbook of Chemistry and Physics, by Hodgman-Lange, (reviewed by K. A. Norton): 983
Hochfrequenztechnik in der Luftfahrt, by H. Fassbender, (reviewed by Lynde P. Wheeler): 1041
International Communications—The American Attitude, by Keith Clark, (reviewed by L. E. Whittemore): 991
National Directory of Commodity Specifications, (reviewed by L. E. Whittemore): 1010
National Physical Laboratory Report for the Year 1930, (reviewed by K. A. Norton): 942

Radio Frequency Electrical Measurements, by H.A. Brown, (reviewed by H. A. Wheeler): 954
Radio in Advertising, by O. E. Dunlap, (reviewed by K. A. Norton): 931
Radio Handbook, by Moyer and Wostrel, (reviewed by S. S. Kirby): 932
Radio Receiving Tubes, by J. A. Moyer and J. F. Wostrel, (reviewed by S. S. Kirby): 1019
Report of the Radio Research Board for the Period Ended December, 1930, (reviewed by S. S. Kirby): 955
Servicing Superheterodynes, by J. F. Rider, (reviewed by H. A. Wheeler): 965
The Federal Radio Commission Service Monograph No. 65, by Laurence F. Schmeckebier, (reviewed by T. A. M. Craven): 982
The National Physical Laboratory Report for the Year 1931, (reviewed by E. L. Hall): 1003
The Orfordness Rotating Beacon and Marine Navigation, by R. L. Smith-Rose, (reviewed by S. S. Kirby): 929
The Standards Year Book, by the Bureau of Standards, (reviewed by L. E. Whittemore): 1009
This Thing Called Broadcasting, by A. N. Goldsmith and A. C. Lescarboura, (reviewed by S. S. Kirby): 943

Bridge:
Campbell-Shackelton Shielded Ratio Box: 977

Broadcasting:
Direct Ray Transmission: 1011
Distortion in Receivers for, and its Compensation: 1005
Field Intensity Measurements for the Determination of Station Coverage: 920
Reception of, Over 12,000 Kilometers Away: 998
Studios for Radio City: 996
Westinghouse Radio Station at Saxonburg, Pa.: 973

Broadcast Frequency Allocation:
Empirical Standards for: 956

Broadcast Stations:
Empirical Standards for Allocation of: 956
Field Intensity Measurements for the Determination of Coverage: 920

C

Cable:
Linearly Tapered Loaded Transmission Lines: 1029

Capacity:
Resistance, Coupled Amplifier Design: 1002

Carillons:
Acoustical and Electrical Power Requirements for Electrical: 957

Cathode Ray Tubes:
Applications of: 1033
Electrode Structures of, Suitable for Television Reception: 1032
Gas-Filled: 997

Characteristics:
of the UV-858 Power Tube for High-Frequency Operation: 946
Receiver, Related to Side-Band Coefficient of the Resonance Circuit: 1026

Coils:
Effect of Displacement Currents on High-Frequency Resistance of Circular Single-Layer: 1028

Communication System of the Radiomarine Corporation of America: 945

Condensers:
Mica, in High-Frequency Circuits: 958

Contacts:
Rectification at Metal: 1008

Control:
Sensitivity, Manual and Automatic: 947

Copper-Oxide Rectifier for Detection and Volume Control: 1013

Coupled Circuits:
Wavelength of, Having Distributed Constants: 1001

Coupling:
Comparison of Amplifiers with Staggered Circuits for: 990

Resistance-Capacity, for Television Amplifiers: 963

D

Demodulation: 1039

Detection:
Copper-Oxide Rectifiers for, and Automatic Volume Control: 1013
Demodulation: 1039
Grid Circuit and Diode: 978
of Microwaves: 1014
of Two Modulated Waves Which Differ Slightly in Carrier Frequency: 953

Detectors:
For Microwaves: 1014

Diode Rectification:
Grid Circuit and: 978

Directional Studies of Atmospherics at High Frequencies: 1036
Direction Finding:
Equipment Used by Coast Guard: 934
Directive Radio Beacon:
Radio Guidance: 1024
Displacement Currents:
Effect of, on High-Frequency Resistance of Circular Single-Layer Coils: 1028
Distortion:
and Output in Symmetrical Output Systems: 1025
in Broadcast Receivers and Compensation: 1005
Dynamic Symmetry in Radio Design: 1006
Dynatron Oscillator:
Crystal Control Applied to: 1020

E

Effects of Topography and Ground on Short-Wave Reception: 962
Electrical Interference in Motor Car Receivers: 960
Electrical:
Method of Frequency Analysis and its Application to Frequency Modulation: 1015
Electrical Networks:
Equivalent: 980
Nonuniform Transmission Line: 981
Electrical Power Requirements for Electric Carillons: 957
Equalization:
Distortion in Broadcast Receivers and its: 1005
Equivalent Electrical Networks: 980

F

Field Intensity:
Automatic, and Static Recorder: 1035
Measurements for Determination of Broadcast Station Coverage: 920
Measurements from 285 to 5400 Kilocycles: 971
Fourier Analysis of Radio-Frequency Power Amplifier Wave Forms: 1015
Frame Aërials:
Action of Short-Wave: 1000
Frequency Analysis:
and its Application to Frequency Modulation: 1015
Frequency Distribution of Atmospherics: 1007
Frequency Modulation:
Reception of: 970
Frequency Stabilization of Radio Transmitters: 939
Frequency Standard:
Precision Tuning Fork: 1021

G

Grid Circuit Detection:
and Diode: 978
Ground:
and Topography Effects on Short-Wave Reception: 962
Guidance:
Radio: 1024

H

Harmonics:
Analyzer: 964
Elimination of in Transmitters: 940
High-Frequency:
Mica Condensers in, Circuits: 958
Operation of the UV-858 Power Tube: 946
Historical:
Review of Ultra-Short-Wave Progress: 923
Ten Years of Transradio—A Retrospect: 919

I

Interference:
Electrical, in Motor Car Receivers: 960
Ionizing Effect of Meteors in Relation to Radio Propagation: 1037

K

Kennelly-Heaviside Layer:
Automatic Recorder for Height of: 951
Heights During Meteor Showers: 1038
Heights for Frequencies between 1600 and 8650 Kilocycles: 938
Studies Employing Rapid Method of Virtual Height Determination: 987

L

Linearly Tapered Loaded Transmission Lines: 1029
Loaded Transmission Lines
Linearly Tapered: 1029
Long Waves:
Daylight Transmission Across North Atlantic During 1922–1930: 961

M

Magnetostatic Oscillators for Generation of Ultra-Short Waves: 1023
Measurements:
Application of Cathode Ray Oscillograph: 1033
Campbell-Shackelton Shielded Ratio Box: 977

Design of Resistors for Precise High Frequency: 985
Electrical Method of Frequency Analysis and its Application to Frequency Modulation: 1015
Field Intensity for Determination of Broadcast Station Coverage: 920
Frequency: 975
Gas-Filled Cathode Ray Tubes: 997
Kennelly-Heaviside Layer Studies Employing Rapid Virtual-Height Determination: 987
of Field Intensities from 285 to 5400 Kilocycles: 971
of High Resistance at High Frequency: 1027
Precision Frequency Measuring System of R.C.A. Communications: 975
Precision Tuning Fork Frequency Standard: 1021
Mechanically Resonant Transformer: 949
Mica Condensers in High-Frequency Circuits: 958
Microwaves:
Detection of: 1014
Modulation:
Demodulation: 1039
Detection of Two Modulated Waves Which Differ Slightly in Carrier Frequency: 953
Electrical Method of Frequency Analysis and its Application to Frequency: 1015
of Tetrode as Radio-Frequency Amplifier: 925
Reception of Frequency: 970
Superposition of Two Modulated Radio Frequencies: 1040
Transmission and Reception of Ultra-Short Waves Modulated by Several Modulated High Frequencies: 974

N

Network:
Theory: 1017
Networks:
Equivalent Electrical: 980
Nonuniform Transmission Line: 981
Noise:
Frequency Distribution of Atmospheric: 1007
in Output Due to A-C Operation of Tubes: 994

O

Operation:
of Ship-Shore Radiotelephone System: 944
of UV-858 Power Tube at High Frequencies: 946
of Vacuum Tubes as Class B and Class C Amplifiers: 952
Optics of Radio Transmission: 918
Oscillations:
New Circuit for Production of Ultra-Short-Wave: 976
Oscillator:
Improved Audio-Frequency: 936
New Type Ultra-Short-Wave: 999
Oscillators:
Application of Quartz Plates to Transmitters: 966
Crystal Control Applied to Dynatron: 1020
Harmonic Elimination: 940
Magnetostatic, for Ultra-Short Waves: 1023
Regenerative Ultra-Short-Wave: 924
Ultra-Short-Wave: 923
Oscillograph:
Applications of Cathode Ray: 1033
Output:
and Distortion in Symmetrical Output Systems: 1025

P

Phase Shift in Radio Transmitters: 972
Piezo-Electric Control:
Applied to Dynatron Oscillator: 1020
Piezo-Electric Crystal:
Application to Radio Transmitters: 966
Piezo-Electric Plates:
Mountings and Temperature Control: 935
Vibrations of: 968
Pittsburgh's Contribution to Radio: 1031
Propagation:
Direct Ray Broadcast Transmission: 1011
Effect on Short-Wave, of Topography and Ground: 962
Influence of Eleven-Year Solar Activity Upon: 950
Kennelly-Heaviside Layer Studies Employing Rapid Method of Virtual-Height Determination: 987
Relative to Meteors: 1037, 1038

R

Radiation:
Characteristics of Vertical Half-Wave Antenna: 1034
Circuit Relations in Radiating Systems and Applications to Antennas: 979
Radio City:
Planning Studios for: 996

Radio-Frequency Amplifier:
Tetrode as a Modulated: 925
Untuned: 922
Radio-Frequency Amplifiers:
Fourier Analysis of Wave Form in: 1016
Study of Class B and C Tank Circuits: 969
Radio Guidance: 1024
Radio Range:
Characteristics of Receiving Antennas for the: 941
Simultaneous Visual, and Radiotelephone: 948
Vibrating Reed Indicators for: 926
Radio System:
of Radiomarine Corporation of America: 945
Radio Systems:
Operation of Ship-Shore Radiotelephone: 944
Ten Years of Transradio—A Retrospect: 919
Radiotelegraphy:
Solar Activity and: 937
Radiotelephone:
Simultaneous, and Radio Range Beacon: 948
Two-Way Circuits: 986
Radiotelephone System:
Operation of Ship-Shore: 944
Receiver:
Sensitivity Control—Manual and Automatic: 947
Receivers:
Application of Class B Audio Amplifier to A–C Operated: 984
Battery Design Problems of Air Cell: 933
Characteristics Related to Side-Band Coefficient oft he Resonance Circuit: 1026
Copper-Oxide Rectifier for Detection and Automatic Volume Control: 1013
Demodulation: 1039
Detection of Microwaves: 1014
Distortion in Broadcast, and its Compensation: 1005
Dynamic Symmetry in Radio Design: 1006
Electrical Interference in Motor Car: 960
For Aircraft Use: 995
Output Disturbances from A–C Operation of Tubes: 994
Problems in Selective Reception: 1004
Resistance-Capacity Coupled for Television: 963
Selectivity of: 959
Trends in Tube Design: 993
Reception:
and Transmission of Ultra-Short-Waves Modulated by Several Modulated High Frequencies: 974
Broadcast Stations Over 12,000 Kilometers Away: 998
Characteristics of Antennas for Radio Range: 941
Demodulation: 1039
Effect of Location of Shore Station Upon: 921
Effects of Topography and Ground on Short-Wave: 962
Electrical Methods of Frequency Analysis and its Application to Frequency Modulation: 1015
Electrode Structures of Cathode Ray Tubes for Television: 1032
of Frequency Modulated Signals: 970
Problems in Selective: 1004
Receiver Characteristics Relating to the Side-Band Coefficient of the Resonance Circuit: 1026
Superposition of Two Modulated Radio Frequencies: 1040
Television, in Aircraft: 1022
Two-Way Radiotelephone Circuits: 986
Recording:
Continuous Height of Kennelly-Heaviside Layer: 951
Rectification:
Current, at Metal Contacts: 1008
Grid Circuit and Diode: 978
Rectifiers:
Copper-Oxide for Detection and Automatic Volume Control: 1013
Regeneration:
Ultra-Short-Wave Oscillators: 924
Resistance:
Capacity Coupled Amplifier Design: 1002
Design for Precise High-Frequency Measurements: 985
Effect of Displacement Currents on High-Frequency, of Circular Single-Layer Coils: 1028
Measurement of High, at High Frequency: 1027
Resonance:
Receiver Characteristics Related to the Side-Band Coefficient of the Circuit: 1026

S

Selectivity:
An Examination of: 959
Problems in Reception: 1004
Sensitivity:
Controls—Manual and Automatic: 947
Shore Stations:
Effect of Location upon Signals: 921

Short-Wave:
Effect of Topography and Ground upon Reception: 962
Short-Wave Radio Transmission:
Transmission Lines for: 989
Side Band:
Receiver Characteristics Related to, Coefficient of the Resonance Circuit: 1026
Signal Intensity:
Automatic, and Static Recorder: 1035
Effect of Location of Shore Stations Upon: 921
Measurements from 285 to 5400 Kilocycles: 971
Signals:
Reception of Frequency Modulated: 970
Solar Activity and Radiotelegraphy: 937
Staggered Circuits:
Comparison of Coupled Amplifiers with: 990
Standards:
Empirical, for Broadcast Allocation: 956
Stations:
Effect of Location upon Signals: 921
Westinghouse Radio, at Saxonburg, Pa.: 973
Studios:
for Radio City: 996
Superposition of Two Modulated Radio Frequencies: 1040
Symmetry:
Dynamic, in Radio Design: 1006

T

Television:
Electrode Structures of Cathode Ray Tubes for: 1032
Gas-Filled Cathode Ray Tubes: 997
Reception in Airplane: 1022
Resistance-Capacity Coupled Amplifiers for: 963
Temperature Control:
and Mountings for Quartz Plates: 935
Test Devices:
Visual: 1012
Tetrode:
As a Modulated Radio-Frequency Amplifier: 925
Theory:
Coupled Amplifiers with Staggered Circuits: 990
Network: 1017
Topography and Ground Effects on Short-Wave Reception: 962
Transatlantic Radio Transmission:
of Long-Wave Signals for 1922–1930: 961
Ten Years of Transradio—A Retrospect: 919
Transformers:
Mechanically Resonant: 949
Transmission:
and Reception of Ultra-Short Waves Modulated by Several Modulated High Frequencies: 974
Directional Studies of Atmospherics at High Frequencies: 1036
Direct Ray Broadcast: 1011
Linearly Tapered, Lines: 1029
Lines for Short-Wave Radio Systems: 989
Nonuniform, Line: 981
North Atlantic, Conditions for Long-Wave Signals, 1922–1930: 961
Optics of Radio: 918
Relative to Daylight: 961
Relative to Eleven-Year Solar Activity: 950
Relative to Meteors: 1037, 1038
Relative to Solar Activity: 937
Two-Way Radiotelephone Circuits: 986
Transmitter:
New Type Ultra-Short-Wave Oscillator: 999
Transmitters:
Application of Quartz Plates to: 966
Crystal Control Applied to the Dynatron Oscillator: 1020
Elimination of Harmonics in: 940
for Aircraft Use: 995
Fourier Analysis of Radio-Frequency Power Amplifier Wave Forms: 1016
Frequency Stabilization of: 939
Phase Shift in Radio: 972
Radiation Characteristics of Vertical Half-Wave Antenna: 1034
Triple-Twin Tubes: 988
Tubes:
Gas-Filled Cathode Ray: 997
Grid Circuit and Diode Rectification: 978
New Water-Cooled Power: 967
Operated as Class B and Class C Amplifiers: 952
Operation of UV-858 Power, at High Frequencies: 946
Output Disturbances from A–C Operation: 994
Trends in Design: 993
Triple-Twin: 988
Tuning Fork:
Precision, Frequency Standard: 1021

U

Ultra-Short Radio Waves:
Detection of: 1014
Historical Review of: 923

Magnetostatic Oscillators for Generation of: 1023
New Circuit for the Production of: 976
New Type Oscillator: 999
Regenerative Oscillators: 924
Transmission and Reception of, Modulated by Several Modulated High Frequencies: 974

V

Vibration of Quartz Plates: 968
Visual Test Devices: 1012
Volume Control:
Copper-Oxide Rectifier for Detection and: 1013

W

Wave:
Fourier Analysis of, Form in Radio-Frequency Power Amplifiers: 1016
Wavelength Characteristics of Coupled Circuits Having Distributed Constants: 1001.
